Marl Jonson

Martinez, CA | (925) 812-6907 | marl.jonson@comcast.net | linkedin/marl-jonson | github/marljonson | marl.dev

Education

San Jose State University **Expected Graduation: May 2027**

Bachelor of Science in Computer Science • GPA: 3.77 *San Jose, CA*

- **Coursework:** Software Engineering, Data Structures & Algorithms, Database Systems, Processing Big Data, Mobile Device Development
- **Organizations:** Responsible Computing Club, Product Management Club, Software & Computer Engineering Society, Spartan Analytics

Experience

Nevada National Security Sites May 2026 – Aug. 2026

Software Engineering Intern *North Las Vegas, NV*

- Migrated in-house and commercial/government off-the-shelf apps from .NET 8 to .NET 10 on Visual Studio
- Rewrote object mapping profiles from AutoMapper to open-source Mapster object mapping library
- Upgraded NuGet packages/dependencies and repaired build errors to ensure .NET 10 compatibility
- Created and tracked Azure DevOps projects and tasks in an Agile software development environment
- Shared progress and participated in weekly stand-ups with a team of 13 full-time analysts

San Francisco Bay Area Rapid Transit District Apr. 2025 – Apr. 2026

Product Management Intern *Oakland, CA*

- Developed Transiteers, a modular Scratch video game introducing youth to careers in public transit
- Interviewed 10+ subject matter experts to record various duties and responsibilities of employees
- Conducted user gameplay testing with various age demographics on-site in Oakland and Berkeley, California
- Collected qualitative user feedback and iteratively redesigned and redeveloped video game features

SJSU Responsible Computing Club Jun. 2025 – Mar. 2026

Software Engineering Ambassador *San Jose, CA*

- Developed and deployed a full-stack web application using React, TypeScript, and backend APIs with version control via GitHub
- Implemented structured development workflows using Jira and Agile sprints to streamline feature releases
- Collaborated on UI/UX prototyping and system design documentation to ensure maintainable and scalable architecture

Projects

Document Processing Pipeline | *C#, ASP.NET Core, Blazor, Azure App Services, Azure Storage, SQL Server, EF Core*

- Built a document processing pipeline to ingest, classify, and route files through workflow states simulating claims and records systems
- Designed SQL Server schema and EF Core models to manage document metadata, status transitions, and ensure reliable data flow
- Implemented processing queues, validation, and error handling to manage failed uploads and ensure system reliability across edge cases
- Deployed to Azure App Services with Blob Storage integration for scalable document storage, retrieval, and cloud-based processing

AI-Assisted Membership Insights Platform | *React, TypeScript, C#, ASP.NET Core, Azure OpenAI, SQL Server, EF Core*

- Built a full-stack application to analyze structured data and generate insights, simulating internal analytics tools for business workflows
- Developed React UI for querying records and visualizing trends, emphasizing usability and responsive design for non-technical users
- Integrated Azure OpenAI for summarization and query assistance, refining prompts to improve accuracy and reduce irrelevant outputs
- Implemented backend services with C# and EF Core to process data, enforce validation, and support scalable API-driven architecture

Membership Management API | *Java, Spring Boot, REST APIs, SQL, JPA/Hibernate, Docker, Kubernetes*

- Developed RESTful APIs using Spring Boot to manage records, supporting CRUD operations and enforcing business validation rules
- Designed relational schemas and integrated JPA/Hibernate to ensure consistent data persistence and reliable system interactions
- Implemented logging, validation, and error handling to improve API reliability and support maintainable backend services
- Containerized with Docker and deployed to Kubernetes, configuring services and pods for scalable and fault-tolerant API access

Mobile Document Capture App | *React Native, JavaScript, Node.js (Express), REST APIs*

- Developed a cross-platform mobile app to capture and upload documents using device camera and networking APIs
- Built a lightweight Node.js (Express) service to handle file uploads and route requests to backend document processing systems
- Implemented real-time upload status, local storage of recent scans, and validation for reliable mobile data handling

Technical Skills

Languages & Frameworks: C#, Java, Python, SQL, TypeScript | .NET, ASP.NET Core, Blazor, React, Spring Boot, JPA/Hibernate, EF Core

Cloud & Tools: Microsoft Azure (App Services, Blob Storage, Azure OpenAI), Docker, Kubernetes, Git, REST APIs, Postman, Visual Studio

Concepts: Full-stack development, API design, database modeling, cloud deployment, system reliability, error handling, Agile development

Certifications: Microsoft Certified: Azure AI Cloud Developer Associate (AI-200)
Microsoft Certified: Azure Fundamentals (AZ-900)
Microsoft Certified: Azure Data Fundamentals (DP-900)
Microsoft 365 Certified: Fundamentals (MS-900)
